☒ Responsive to communication(s) filed on Nov 9, 2000

☐ This action is **FINAL**.

☐ Since this application is in condition for allowance except for formal matters, **prosecution as to the merits is closed** in accordance with the practice under *Ex parte Quayle*, 35 C.D. 11; 453 O.G. 213.

A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).

## Disposition of Claim

☒ Claim(s) 1-13 is/are pending in the applicat

Of the above, claim(s) \_\_\_\_\_ is/are withdrawn from consideration

☐ Claim(s) \_\_\_\_\_ is/are allowed.

☒ Claim(s) 1-13 is/are rejected.

☐ Claim(s) \_\_\_\_\_ is/are objected to.

☐ Claims \_\_\_\_\_ are subject to restriction or election requirement.

## Application Papers

☐ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on \_\_\_\_\_ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on \_\_\_\_\_ is ☐ approved ☐ disapproved.

☐ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. § 119

☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☐ All ☐ Some\* ☒ None of the CERTIFIED copies of the priority documents have been

☐ received.

☐ received in Application No. (Series Code/Serial Number) \_\_\_\_\_

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

Art Unit: 1743

## DETAILED ACTION

### *Continued Prosecution Application*

1. The request filed on November 9, 2000 for a Continued Prosecution Application (CPA) under 37 CFR 1.53(d) based on parent Application No. 09/296,217 is acceptable and a CPA has been established. Claims 1-13 are pending in the instant application. An action on the CPA follows.

### *Double Patenting*

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321© may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 1-13 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of copending Application No. 09/296,216. Although the conflicting claims are not identical, they are not patentably distinct from each other because while the instant claims recite "lost circulation additive" and the claims of the copending application recite "conformance additive", both additives comprise the same

Art Unit: 1743

components. While the preamble appears to be different, it is known in the art that the types of compositions claimed by Applicants are suitable for both conformance fluids and lost circulation fluids. The two additives are essentially the same.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

4. Claims 1-13 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of copending Application No. 08/962,209. Although the conflicting claims are not identical, they are not patentably distinct from each other because while the instant claims recite "lost circulation additive" and the claims of the copending application recite "tubing/casing plug additive", both additive comprise the same components. While the preamble appears to be the same, it is known in the art that these types of additives are suitable for both lost circulation and tubing/casing plugging.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

5. Claims 1-13 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-13 of copending Application No. 09/307,544. Although the conflicting claims are not identical, they are not patentably distinct from each other because while the instant claims recite "lost circulation additive" and the claims of the copending application recite "well plug additive", the additives comprise the same

Art Unit: 1743

components. While the preamble appears to be different, it is known that these types of additives are suitable for both lost circulation and well plugging.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

***Claim Rejections - 35 USC § 103***

6. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

7. Claims 1, 2, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 4,989,673 to Sydansk (hereinafter referred to as Sydansk '673) in view of Githens '979.

Applicants' claimed invention is directed to a lost circulation additive comprising a dry mixture of a water soluble cross-linkable polymer, a cross linking agent, and a reinforcing material selected from fibers and comminuted plant material.

Sydansk '673 teaches a cross linked gel which functions as a lost circulation fluid by coating and plugging the wellbore face to prevent flow of fluids across a face (col. 7, lines 6-8). The cross linked gel comprises a water soluble polymer and a cross linking agent. See abstract. The water soluble polymer is a carboxylate containing polymer having one or more carboxylate groups (col. 3, lines 24-36). A preferred water soluble polymer of Sydansk '673 is partially hydrolyzed polyacrylamide, such as recited in instant claim 7 (col. 3, lines 37-54). The cross

Art Unit: 1743

linking agent is a chromic carboxylate complex, such as recited in instant claim 2 (col. 3, lines 55-64). Sydansk '673 also teaches the additional use of inert solids, such as sand, fiberglass, cellulosic fibers, and plastic fibers to enhance the strength of the gel formed by the polymers and cross linking agents (col. 6, lines 57-61).

Sydansk '673 differ from the instantly claimed invention in that Sydansk does not appear to teach a dry mixture of water soluble crosslinkable polymer, crosslinking agent, and reinforcing material.

Githens '979 teach a dry mixture of a crosslinking compound and a hydratable gelling agent, wherein the dry mixture can be activated by the addition of water. Githens '979 teach crosslinking compounds gelling agents similar to those used by Applicants. Githens '979 further teach that the use of dry mixture of components provides good storage stability for at least three months.

Thus, in view of the teachings of Githens '979 it would have been obvious to one or ordinary skill in the art to use a dry mixture of the components of Sydansk '673 to provide better storage stability for the components.

Therefore, for the reasons set forth above, Applicants' claimed invention is deemed to be obvious, within the meaning of 35 U.S.C. 103, in view of the teachings of Sydansk '673 and Githens '979.

Art Unit: 1743

8. Claims 1-4, and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,377,760 to Merrill (herein referred to as Merrill '760) in view of Githens '979.

Applicants claimed invention is directed to a lost circulation additive comprising a dry mixture of a water soluble cross-linkable polymer, a cross linking agent, and a reinforcing material selected from fibers and comminuted plant material.

Merrill '760 discloses gels capable of blocking or plugging relatively large openings in permeable formations. The gels of Merrill '760 also useful in improving the conformance of formations encountered in the drilling and production of hydrocarbons from subterranean wells (col. 1, lines 12-16). The gels of Merrill '760 comprise a partially hydrolyzed carboxylate-containing polymer and a chromic carboxylate complex as a cross linking agent, such as recited in instant claim 2. The preferred hydrolyzed polymer is a partially hydrolyzed polyacrylamide polymer, such as recited in instant claim 7 (col. 2, lines 63-68). Merrill '760 also discloses the use of reinforcing materials which are incorporated into the gels. These reinforcing materials include hydrophilic fibers and hydrophobic fibers. The hydrophilic fibers are those such as glass, cellulose, carbon, silicon, graphite, coke, cotton fibers, and mixtures. The hydrophobic fibers are those such as nylon, rayon, hydrocarbon fibers, and mixtures, such as recited in instant claim 3 (col. 4, lines 14-25).

Merrill '760 differs from the instantly claimed invention in that there is no specific teaching to the combined use of both hydrophilic and hydrophobic reinforcing materials.

Art Unit: 1743

However, since both of the reinforcing materials are disclosed as being used for the same purpose of enhancing the gels formed from the hydrolyzed polymers and cross linking agents, it would have been obvious to one of ordinary skill in the art to combine the two types of reinforcing materials. Absent evidence to the contrary, the use of both types of reinforcing materials (hydrophilic and hydrophobic) would result in an effective additive for use as a lost circulation additive.

Merrill '760 also differ in that there is no disclosure of a dry mixture of components.

Githens '979 teach a dry mixture of a crosslinking compound and a hydratable gelling agent, wherein the dry mixture can be activated by the addition of water. Githens '979 teach crosslinking compounds gelling agents similar to those used by Applicants. Githens '979 further teach that the use of dry mixture of components provides good storage stability for at least three months.

Thus, in view of the teachings of Githens '979 it would have been obvious to one of ordinary skill in the art to use a dry mixture of the components of Merrill '760 to provide better storage stability for the components.

Therefore, for the reasons set forth above, Applicants' claimed invention is deemed to be obvious within the meaning of 35 U.S.C. 103, in view of the teachings of Merrill '760 and Githens '979.

Art Unit: 1743

Claims 1, 2, and 5-13 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent 5,004,553 to House et al (herein referred to as House et al '553) in view of U.S. Patent 3,208,524 to Horner et al (herein referred to as Horner et al '524) and Githens '979.

Applicants claimed invention is directed to a lost circulation additive comprising a dry mixture of a water soluble cross-linkable polymer, a cross linking agent, and a reinforcing material selected from fibers and comminuted plant material.

House et al '553 disclose seepage loss fluids for well working applications. The fluids of House et al '553 comprise a combination of reinforcing materials such as oat hulls, corn cobs, cotton, citrus pulp, and cotton burrs. House et al '553 also disclose the conventional use of particulates of peanuts, almond, cocoa bean, cottonseed, rice, cotton linters, wool, paper, straw, wood fibers, etc. (col. 2, lines 7-27). House et al '553 disclose the use of the reinforcing particulate material in combination with a crosslinkable polymer (col. 5, lines 1-5). House et al '553 discloses suitable crosslinkable polymer as those described in U.S. Patent 4,722,397 to Sydansk (col. 20-38). The crosslinkable polymers of Sydansk '397 comprise a water soluble carboxylate containing polymer and a cross linking agent such as chromic carboxylate complex, such as instantly claimed by Applicants. (See abstract of Sydansk '397.) The use of the cross linkable polymer in combination with the reinforcing particulate materials form a plugging agent for boreholes (col. 5, lines 1-9). House et al '553 further disclose the preparation of the fluids by adding the seepage loss additives to water based well working fluids (col. 5, lines 39-68 and col. 6, lines 1-25).

Art Unit: 1743

House et al '553 differ from the instantly claimed invention in that there is no disclosure of the use of cellophane in the seepage loss additives. There is also no disclosure of the use of the fluids of House et al '553 as conformance additives.

Horner et al '524 teach loss circulation fluids similar to those disclosed by House et al '553 in that they comprise crosslinkable polymers. Horner et al '524 teach the employment of bulking agents into the polymer gels to reduce the amount of gel required and to permit the plugging of large fissures which might otherwise be difficult to plug (col. 5, lines 42-48). As bulking agents, Horner et al '524 discloses cellophane and a variety of other fibrous, flaky or granular materials.

Thus, in view of the teaching of the use of cellophane in combination with other fibrous, flaky or granular materials in loss circulation additives for well working fluids, it would have been obvious to one of ordinary skill in the art to employ cellophane as an additional component of the loss circulation additive of House et al '553. One of ordinary skill in the art would expect that the addition of cellophane to the fluids of House et al '553 would result in a loss circulation additive similar to that instantly claimed by Applicants, absent evidence to the contrary.

With respect to House et al '553 not teaching the use of those fluids as conformance additives, it is known in the art that fluids such as those disclosed by House et al '553 are useful in improving conformance.

Art Unit: 1743

Also, neither House et al '553 or Horner et al '524 disclose the use of a dry mixture of components.

Githens '979 teach a dry mixture of a crosslinking compound and a hydratable gelling agent, wherein the dry mixture can be activated by the addition of water. Githens '979 teach crosslinking compounds gelling agents similar to those used by Applicants. Githens '979 further teach that the use of dry mixture of components provides good storage stability for at least three months.

Thus, in view of the teachings of Githens '979 it would have been obvious to one of ordinary skill in the art to use a dry mixture of the components of House et al '553 and Horner et al '524 to provide better storage stability for the components.

Therefore, for the reasons set forth above, Applicants' instantly claimed invention is deemed to be obvious within the meaning of 35 U.S.C. 103, in view of the teachings of House et al '553 and in view of Horner et al '524 and Githens '979.

### ***Response to Arguments***

9. Applicant's arguments with respect to claims 1-13 have been considered but are moot in view of the new ground(s) of rejection.
